

DAY 1: Introduction to Risk Management and BowTieXP Theory

- Risk Management Principles
- BowTieXP Methodology Theory

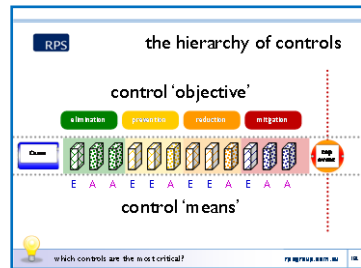

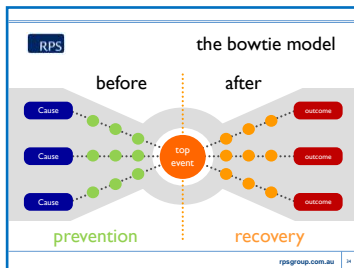

The program begins by laying a foundation of the approach to qualitative risk management. The course branches out into a detailed explanation of how to apply the BowTieXP risk management methodology, to the analysis of major hazards and risks. We adapt a practical approach is throughout the presentation and is based on significant industry experience.

BowTieXP Risk Management Software Application

- BowTieXP software introduction
- BowTieXP software demonstration
- BowTieXP learning exercises

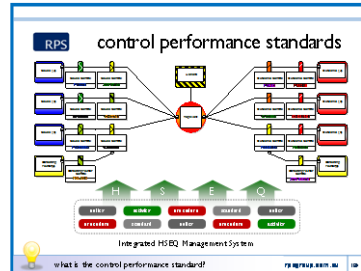

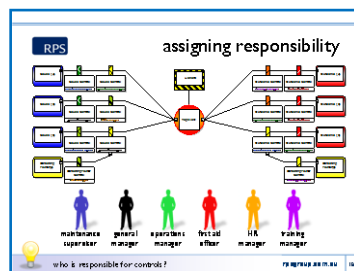

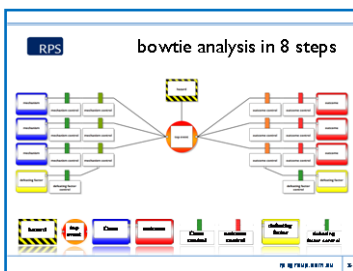

The theory is applied using the BowTieXP software to expedite learning to create BowTies considering various practical scenarios. This session addresses the best practices for using the software in a corporate learning environment and to use its powerful features to create risk assessments which can be included in a HSE case document.

DAY 2: BowTieXP Risk Management Software and Workshop

- BowTieXP learning using case studies
- BowTieXP capabilities and reporting

Day 2 begins with new software demonstrations, exercises and case studies. It also covers the capability of the software reporting functions and BowTieXP workshop facilitation. By the end of Day-2 participants will be prepared to apply and facilitate the BowTieXP management software in their workplace.

"I found the training material to be well presented, and with a good balance of instruction and practical, hands-on exercises.... it is a user friendly program that it is not too hard to find how to do things. Excellent trainer – very precise and clear to understand" - OMV
